

BN7 House

Domum Projects is a young multidisciplinary team with deep collective experience and a clear objective: to develop real-estate projects with satisfied buyers and strong investment fundamentals. The firm brings together leading architects, engineers, project managers, technical architects, and financial advisers to deliver successful, design-driven investment projects.

Domum executes all types of property projects—residential and commercial, ground-up construction and renovations. The team oversees the full life cycle: identifying and securing the right land, developing architectural and interior design, managing construction, and handling all coordination with authorities. Clients can tailor the scope of services to their needs.

Domum consistently evaluates market conditions to ensure the profitability of each investment, selecting the best opportunities and combining them with refined design, top-tier materials, and disciplined execution.

Domum Projects collaborates with leading design practices such as Jorge Bibiloni Studio—a Mallorca-based architecture and interior design firm known for its contemporary yet timeless approach, rooted in proportion, materiality, and lived comfort. One of their shared works is BN7 House, a high-end residential project in the Son Vida area of Mallorca that reflects the complementary strengths of the two firms: Domum’s integrated project and investment management with Jorge Bibiloni Studio’s architectural and interior expression.
